# ANALYZING E-LEARNING PLATFORM PURCHASES USING MYSQL

*MySQL Module End Assignment*

## KEY INSIGHTS

The analysis of 5 learners, 6 courses and 8 purchase transactions revealed the following:

1. **Revenue Contribution:** The Data category generated 4,393.00, accounting for approximately 71% of the total revenue of 6,188.00.
2. **Course Performance:** Excel for Beginners recorded the highest sales volume with 4 units sold, while Power BI Essentials generated the highest individual course revenue of 2,097.00.
3. **Learner Spending Patterns:** Maria Garcia recorded the highest spending of 2,197.00 despite purchasing fewer units than Asha Kumar and Rahul Sharma.
4. **Purchasing Behaviour:** Asha Kumar and Rahul Sharma purchased courses across two categories, while Maria Garcia's purchases were concentrated in the Data category.
5. **Untapped Opportunity:** Digital Marketing Fundamentals recorded no purchases, indicating an opportunity to review its visibility and marketing approach.
6. **Productivity Category:** Excel for Beginners sold 4 units despite being the only course in the Productivity category, suggesting potential interest in beginner-friendly productivity courses.
7. **Monthly Performance:** February recorded the highest revenue of 3,094.00 among the recorded months. However, March includes data only up to March 5.

## RECOMMENDATIONS

1. **Strengthen High-Performing Categories:** Continue developing the Data category while exploring opportunities to introduce related courses.
2. **Evaluate Course Performance Holistically:** Consider both sales volume and revenue when identifying successful courses, as the most purchased course may not generate the highest revenue.
3. **Introduce Personalised Recommendations:** Suggest courses based on learners' purchasing history and category preferences to encourage further purchases.
4. **Explore Course Expansion:** Consider introducing additional beginner-friendly Productivity courses based on the performance of Excel for Beginners.
5. **Improve Course Visibility:** Review the visibility, pricing and presentation of courses that have not received purchases and consider targeted promotional campaigns to improve awareness.
6. **Monitor Revenue Trends:** Track monthly revenue and course sales regularly to identify changing purchasing patterns and evaluate promotional strategies.

## CONCLUSION

The analysis highlights differences in course popularity, revenue contribution and learner purchasing behaviour. These findings demonstrate how SQL can be used not only to retrieve and analyse data but also to identify business opportunities and support informed decisions.

***Note:*** *This analysis is based on sample data created for the assignment. The figures represent only the records included in the dataset. The March figures cover purchases recorded up to March 5, 2026.*
